About This Release

The latest version of this release is: 22.0-SNAPSHOT.

You can see the [detailed change log](#) on GitHub.

Coming from an older Scout version? Check out the [Migration Guide](#) for instructions on how to obtain the new version and upgrade existing applications.

Demo Applications

The demo applications for this version can be found on the [features/version/22.0-SNAPSHOT](#) branch of our docs repository on GitHub.

If you just want to play around with them without looking at the source code, you can always use the deployed versions:

- <https://scout.bsi-software.com/contacts/>
- <https://scout.bsi-software.com/widgets/>
- <https://scout.bsi-software.com/jswidgets/>

Native Notification Support

It's now possible to send notifications via the Notification API. The `DesktopNotification` has two new properties to control the behavior: `nativeOnly` and `nativeNotificationVisibility`.

Text Post-Processors

A new Bean `org.eclipse.scout.rt.platform.nls.ITextPostProcessor` has been introduced which allows to modify all texts returned by a `TextProviderService`.

This allows applying application wide logic on all translated texts including the ones provided by Scout itself.
